

## Area wide Insect Trapping Network

*VegIPM Update, Vol. 6, No. 24, Dec 9, 2015*

Results of pheromone and sticky trap catches can be viewed [here](#).

*Corn earworm:* Corn earworm moth activity remains very low levels across all trapping locations consistent with lower temperatures.

*Beet armyworm:* BAW activity decreased slightly in most areas, but moth captures remain steady in the many trap locations. Activity is quite a bit lower than this time last season.

*Cabbage looper:* Cabbage looper moth activity remains light compared to last year, but has increased in the Dome and Gila Valleys.

*Whitefly* Adult movement is very low consistent with cooler temperatures.

*Thrips* Thrips movement is on the decline in all areas, and at very low levels.

*Aphids:* Aphid movement has decreased over the past two weeks, but were active captured in the Gila and Yuma Valley.

*Leafminers* Adult activity is low at all trapping locations.
